Case Study: Custom Financial Model for a $13B, 10,000-Acre Mixed-Use Mega Project

A complete solution for complex real estate planning!

At a glance

We partnered with a global real estate developer on a $13 billion, 10,000-acre master-planned project that included townhomes, retail, hotel, and multifamily units. The objective was to build a powerful, scalable financial model capable of handling multi-phase construction, multiple funding layers, and return analysis across project stages.

CHALLENGES

The phased nature of the project made construction scheduling and funding flow highly complex, with equity-first deployment, staggered bank financing, and reinvested sale proceeds complicating reserve tracking. Calculating phase-wise and consolidated returns was difficult, and the client lacked a unified dashboard to monitor performance across all phases.

SOLUTIONS

We built a custom financial model with multi-layered financing logic, automated timelines, and return metrics at both phase and project levels. A dynamic dashboard provided real-time visibility into costs, returns, funding gaps, and reserves.

Advanced Financial Modeling

Capital Stack Structuring

Real Estate Phased Analytics

BENEFITS

1

Smart Reserve & Proceeds Management

Automated tracking of sale proceeds and redeployment across phases improved liquidity planning.

2

Accurate Return Analysis

Phase-wise and consolidated return metrics enabled better decision-making and investor reporting.

3

Planning Efficiency

Timeline-driven cash flow model streamlined financing and scheduling coordination across departments.
