Case Study: Multifamily Asset Management Reporting Template

A plug-and-play Excel dashboard unifying P&L, Rent Roll, and AR data for operators of any scale.

At a glance

We designed a ready-to-deploy Excel template that consolidates three core data inputs, trailing-12 P&L actuals, current-month rent roll, and AR aging, into a single, operator-ready dashboard. Built for multifamily portfolios of any size, it surfaces critical income, vacancy, delinquency, and expense KPIs at a glance, featuring configurable threshold triggers and automated variance flags to streamline asset management.

Key metrics

17 KPI TRIGGERS
Automated alerts for live threshold monitoring

MULTI-PERIOD TRENDING
Built-in T1 through T120 rolling comparisons

CHALLENGES

Asset managers face recurring data integration problems, dealing with P&L actuals, rent rolls, and AR aging reports that arrive in separate, inconsistent files. Manually reconciling these inputs into a coherent performance view is time-consuming and error-prone, creating critical blind spots around delinquency spikes, vacancy drift, expense overruns, and loss-to-lease gaps that compound over reporting periods.

SOLUTIONS

We built a structured Excel environment that automatically ingests T12 financials, current rent rolls, and AR aging into a unified operator dashboard. Each module feeds the central view instantly, providing period-selectable trending, unit-type breakdowns, and operator-configurable expense triggers without requiring manual data copying.

- **Dynamic Dashboard**
- **Rent Roll Analytics**
- **AR Delinquency Tracker**

BENEFITS

1

Dynamic Master Dashboard

Features a centralized, dynamic dashboard that instantly presents all integrated files and key metrics in one single place. As operators update source data, the entire 7-sheet connected architecture refreshes automatically.

2

Automated Variance Alerts

Features 17 configurable triggers (e.g., vacancy %, bad debt, NOI margin) that fire automatically when actuals breach operator-set thresholds, turning the dashboard into a live exception report.

3

Comprehensive Financial Visibility

Combines multi-period income trending (T1-T12), a granular lease expiry matrix, and an AR aging tracker that spotlights the top 7 delinquent balances to prioritize collections without opening a separate report.
