Case Study: High-Volume Multifamily Underwriting & Custom BOV Model

A dynamic, macro-enabled solution driving rapid deal analysis for a global brokerage.

At a glance

We partnered with CBRE to develop a fully dynamic, macro-enabled multifamily underwriting model designed to produce complete Broker Opinion of Value (BOV) reports. After engineering this custom, brand-aligned tool, we transitioned into an ongoing operational role. Today, our team acts as their dedicated daily underwriting engine, executing detailed financial and market analyses to deliver three fully underwritten deals every single day in just 2-3 hours per asset.

Key metrics

3 DEALS PER DAY
Consistent, high-volume underwriting execution.

2-3 HOURS
Rapid turnaround time from raw data to a completed model.

1-CLICK OUTPUT
Macro-enabled sequential printing for instant BOV generation.

CHALLENGES

The client needed to process a high volume of multifamily deals rapidly without sacrificing analytical depth. Traditional underwriting required massive time commitments to manually evaluate T12s, rent rolls, complex tax structures, and market comps. They lacked a centralized, highly automated model that could consolidate these detailed inputs and instantly format them into a presentation-ready sequence for BOV pitches.

SOLUTIONS

We first engineered a dynamic, macro-enabled Excel model featuring a centralized dashboard and automated demographic sheets, perfectly aligned with the client's corporate branding. Utilizing this custom tool, we now perform daily underwriting for the client. For each deal, we execute detailed T12 and rent roll analysis, evaluate rent and sale comps, structure complex tax scenarios (including abatements and PILOTs), adjust OpEx, and model market-aligned renovation strategies.

Macro-Enabled Modeling

Deep Market Analysis

BOV Automation

BENEFITS

1

High-Volume Execution

Consistently deliver three fully underwritten multifamily deals every day, dramatically increasing the brokerage team's pipeline capacity and speed to market.

2

Comprehensive Precision

Maintain strict analytical rigor within a 2-3 hour window by incorporating granular sensitivity analyses, pricing scenarios, and detailed tax abatement/PILOT modeling.

3

Instant BOV Generation

The macro-enabled model automatically sequences and perfectly formats all financial, operational, and demographic sheets, ensuring they are instantly ready to print for client presentations.
