Case Study: ARGUS Update and Financial Modeling for a 14-Property Office Portfolio

A comprehensive valuation and forecasting solution for a $120M real estate acquisition.

At a glance

We partnered with a client to update and consolidate financial models for a portfolio of 14 office properties acquired between 2021 and 2022. The objective was to update ARGUS models for over 150 tenants, integrate complex historical financials, and forecast future cash flows. By meticulously matching historical data with new capital structures, we delivered precise return metrics and a current portfolio valuation.

Key metrics

PORTFOLIO SIZE:
14 Office Properties

TENANT VOLUME:
150+ Active Tenants

ACQUISITION VALUE:
~$120 Million

PROJECTED VALUATION:
~$160 Million (at 100% occupancy)

CHALLENGES

The client needed to update complex financial data for a 14-property office portfolio purchased in 2021-2022. Tracking over 150 tenants, including recent renewals and new leases, required a meticulous review of initial lease agreements and current rent rolls. Furthermore, calculating accurate return metrics required integrating complex historical data, such as capital expenditures, refinancing, new equity, and mezzanine debt, into a unified portfolio model.

SOLUTIONS

We updated ARGUS models for all 14 properties using current lease data. After exporting the cash flows, we built a comprehensive Excel model integrating historical financials and capital events to perfectly match existing records and accurately forecast performance.

BENEFITS

1

Precision Valuation

Successfully valued the portfolio at $160 million (assuming 100% occupancy), providing a clear, data-backed picture of asset appreciation from the initial $120 million purchase price.

2

Accurate Return Metrics

By flawlessly matching historical financial data with complex new capital structures (including CapEx, refi, and mezz debt), we delivered precise return metrics from the exact date of closing.

3

Unified Portfolio Visibility

Consolidated 14 individual property cash flows into a single, cohesive portfolio model, enabling seamless forecasting, streamlined reporting, and highly effective strategic planning.
